

1. (original) A self-adhering underlayment for tile roofing assemblies comprising:  
a dual-compound composite sheet having a carrier sheet with a front side and a back side, the carrier sheet being sandwiched between a top layer and a bottom layer:  
the top layer comprised of a mixture of: (a) polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) filler, and (c) asphalt;  
the bottom layer comprised of ~~heat-and-pressure-activated~~ self-adhesive compound comprised of a mixture of: (a) styrene-butadiene-styrene copolymer, (b) styrene-isoprene-styrene copolymer, (c) hydrocarbon tackifying resins, and (d) asphalt; and  
the top and bottom layers forming oppositely facing upper and lower surfaces.
2. (original) A self-adhering underlayment as described in Claim 1, wherein:  
the first top layer is comprised of a mixture of: (a) 5% to 25% polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) 0% to 70% of filler, and (c) 45% to 77% asphalt; and  
the second bottom layer of ~~heat-and-pressure-activated~~ self-adhesive compound is comprised of a mixture of: (a) 3% to 10% styrene-butadiene-styrene copolymer, (b) 4% to 11% styrene-isoprene-styrene copolymer, (c) 20% to 33% hydrocarbon tackifying resins, and (d) remainder asphalt.
3. (original) A self-adhering underlayment as described in Claim 2, wherein:  
the hydrocarbon tackifying resins in the bottom layer compound is primarily Polyvinyl Butyral.
4. (original) A self-adhering underlayment as described in Claim 3, wherein:  
the top layer has a surface feature selected from the group consisting of:  
(a) a stitch-bonded fabric carried by said top layer,  
(b) granules carried by said top layer, and  
(c) a film applied to said top surface, said film having an anti-skid upper surface.
5. (original) A self-adhering underlayment as described in Claim 1, wherein:  
said filler is selected from the group consisting of: limestone, talc, fly ash, volcanic ash, graphite, carbon black, silica, china clay, fire retardants and combinations thereof.

6. (currently amended) A self-adhering underlayment for tile roofing assemblies comprising: as described in Claim 5, wherein:

a dual-compound composite sheet having a carrier sheet with a front side and a back side, the carrier sheet being sandwiched between a top layer and a bottom layer,

the top layer comprised of a mixture of: (a) polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) filler, and (c) asphalt; said filler being selected from the group consisting of: limestone, talc, fly ash, volcanic ash, graphite, carbon black, silica, china clay, fire retardants and combinations thereof;

the top layer having a surface feature selected from the group consisting of:

a stitch-bonded fabric carried by said top layer, granules carried by said top layer, and a film applied to said top surface, said film having an anti-skid upper surface;

the bottom layer comprised of a self-adhesive compound comprised of a mixture of: (a) styrene-butadiene-styrene copolymer, (b) styrene-isoprene-styrene copolymer, (c) hydrocarbon tackifying resins that is primarily Polyvinyl Butyral, and (d) asphalt; and

the top and bottom layers forming oppositely facing upper and lower surfaces,

the first top layer is comprised of a mixture of: (a) 5% to 25% polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) 0% to 70% of filler, and (c) 45% to 77% asphalt; and the second bottom layer of self-adhesive compound is comprised of a mixture of: (a) 3% to 10% styrene-butadiene-styrene copolymer, (b) 4% to 11% styrene-isoprene-styrene copolymer, (c) 20% to 33% hydrocarbon tackifying resins, and (d) remainder asphalt;

the Atactic Polypropylene top layer compound is further comprised of fire retardant filler additives selected from the group consisting of calcium borate, magnesium borate, a mixture of antimony tri-oxide and deca bromo diphenyl oxide.

7. (currently amended) A self-adhering underlayment as described in Claim 1, wherein:

the Atactic Polypropylene top layer compound contains a tackifying resin.

8. (original) A self-adhering underlayment as described in Claim 1, wherein:

a surfacing agent is at least partly imbedded in the upper surface of the composite.

9. (original) A self-adhering underlayment as described in Claim 8, wherein:

the surfacing agent is selected from the group consisting of stitch-bonded polypropylene fabric and a granular material.

10. (original) A self-adhering underlayment as described in Claim 1, wherein:

a release liner having a contact and non-contact surface is applied to the lower surface of the composite; and

the release liner is a polyester, polypropylene or polyethylene film having a siliconized contact surface and a white color non-contact surface.

11. (currently amended) A self-adhering underlayment ~~as described in Claim 1 wherein:~~ for tile roofing assemblies comprising:

a dual-compound composite sheet having a carrier sheet with a front side and a back side, the carrier sheet being sandwiched between a top layer and a bottom layer:

the top layer comprised of a mixture of: (a) polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) filler, and (c) asphalt;

the bottom layer comprised of ~~heat and pressure activated~~ self-adhesive compound comprised of a mixture of: (a) styrene-butadiene-styrene copolymer, (b) styrene-isoprene-styrene copolymer, (c) hydrocarbon tackifying resins, and (d) asphalt; and

the top and bottom layers forming oppositely facing upper and lower surfaces,

a side lap having a width of 3 inches to 4 inches running longitudinally along one lengthwise edge of the composite; and

an end lap having a width of 4 inches to 6 inches running widthwise along one end of the composite.

12. (original) A self-adhering underlayment as described in Claim 12, wherein:

a release film is applied to the side lap and end lap.

13. (original) A self-adhering underlayment as described in Claim 1, wherein:

a surfacing agent comprised of a granular material is at least partly imbedded in the upper surface of the composite in areas other than said side and end laps.

14. (original) A self-adhering underlayment as described in Claim 1, wherein:

said carrier is made of polyester.

15. (original) A self-adhering underlayment as described in Claim 1, wherein:

said carrier is made of fiberglass.

16. (original) A self-adhering underlayment as described in Claim 1, wherein:

said carrier is made of a material selected from the group consisting of polyester and fiberglass;

and a combination of polyester and fiberglass.

17. (currently amended) A self-adhering underlayment for tile roofing assemblies comprising:

a composite having a carrier sheet with a front side and a back side, the carrier sheet being sandwiched between a top layer and a bottom layer:

the top layer comprised of a mixture of: (a) polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) filler, and (c) bitumen;

the bottom layer comprised of ~~heat-and-pressure-activated~~ self-adhesive compound which is a mixture of: (a) styrene-butadiene-styrene copolymer, (b) styrene-isoprene-styrene copolymer, (c) hydrocarbon tackifying resins, (d) and asphalt; and

the top and bottom layers forming oppositely upper and lower surfaces,

said top layer having a surface feature selected from the group consisting of:

(a) a stitch-bonded fabric carried by said top layer,

(b) granules carried by said top layer, and

(c) a film applied to said top surface.

18. (original) A self-adhering underlayment as described in Claim 17, wherein:

said granules extend over substantially the entire area of the upper surface of said top layer, except for a granule-free side lap and a granule-free end lap.

19. (original) A self-adhering underlayment as described in Claim 17, wherein:

the hydrocarbon tackifying resins in the bottom layer compound is primarily Polyvinyl Butyral.

20. (original) A self-adhering underlayment as described in Claim 19, wherein:

the first top layer is comprised of a mixture of: (a) 5% to 25% polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) 0% to 70% of filler, and (c) 45% to 77% asphalt; and

the second bottom layer of ~~heat and pressure activated~~ self-adhesive compound is comprised of a mixture of: (a) 3% to 10% styrene-butadiene-styrene copolymer, (b) 4% to 11% styrene-isoprene-styrene copolymer, (c) 20% to 33% hydrocarbon tackifying resins, and (d) remainder asphalt.

21. Cancelled.

22. (currently amended) A self-adhering underlayment ~~as described in Claim 21, wherein:~~ for tile roofing assemblies comprising:

a composite having a carrier sheet with a front side and a back side, the carrier sheet being sandwiched between a top layer and a bottom layer:

the top layer comprised of a mixture of: (a) polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) filler, and (c) bitumen;

said filler being selected from the group consisting of: limestone, talc, fly ash, volcanic ash, graphite, carbon black, silica, china clay, fire retardants and combinations thereof;

the bottom layer comprised of self-adhesive compound which is a mixture of: (a) styrene-butadiene-styrene copolymer, (b) styrene-isoprene-styrene copolymer, (c) hydrocarbon tackifying resins, (d) and asphalt; and

the top and bottom layers forming oppositely upper and lower surfaces,

said top layer having a surface feature selected from the group consisting of:

(a) a stitch-bonded fabric carried by said top layer,

(b) granules carried by said top layer, and

(c) a film applied to said top surface;

the ~~Atactic Polypropylene~~ top layer compound further contains a fire retardant filler additive selected from the group consisting of calcium borate, magnesium borate, a mixture of antimony tri-oxide and deca bromo diphenyl oxide.

23. (currently amended) A self-adhering underlayment as described in Claim 17, wherein:

the ~~Atactic Polypropylene~~ top layer compound further contains a tackifying resin.

24. (original) A self-adhering underlayment as described in Claim 17, wherein:

a surfacing agent is at least partly imbedded in the upper surface of the composite.

25. (original) A self-adhering underlayment as described in Claim 24, wherein:

the surfacing agent is a granular material.

26. (original) A self-adhering underlayment as described in Claim 17, wherein:

a release liner having a contact and non-contact surface is applied to the lower surface of the composite; and

the release liner is a polyester, polypropylene or polyethylene film having a siliconized contact surface and a white color non-contact surface.

27. (currently amended) A self-adhering underlayment ~~as described in Claim 17,~~  
~~wherein:~~ for tile roofing assemblies comprising:

a composite having a carrier sheet with a front side and a back side, the carrier sheet being sandwiched between a top layer and a bottom layer, the top layer comprised of a mixture of polypropylene modifiers comprised of: (a) isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) filler, and (c) bitumen;

the bottom layer comprised of self-adhesive compound which is a mixture of: (a) styrene-butadiene-styrene copolymer, (b) styrene-isoprene-styrene copolymer, (c) hydrocarbon tackifying resins, (d) and asphalt; and

the top and bottom layers forming oppositely upper and lower surfaces,

said top layer having a surface feature selected from the group consisting of:

(a) a stitch-bonded fabric carried by said top layer,

(b) granules carried by said top layer, and

(c) a film applied to said top surface;

said top layer has a side lap having a width of 3 inches to 4 inches runs longitudinally along one lengthwise edge of the composite, said side lap being free of any surface agent carried by said top layer; and

said top layer has a granule-free an end lap having a width of 4 inches to 6 inches runs widthwise along one end of the composite, said end lap being free of any surface agent carried by said top layer.

28. (currently amended) A self-adhering underlayment as described in Claim ~~26~~ 27,  
wherein:

a release film is applied to the side lap and end lap.

29. (original) A self-adhering underlayment as described in Claim 17, wherein:  
a surfacing agent comprised of a granular material is at least partly imbedded in the upper surface of the composite in areas other than said side and end laps.
30. (original) A self-adhering underlayment as described in Claim 17, wherein:  
said carrier is made of polyester.
31. (original) A self-adhering underlayment as described in Claim 17, wherein:  
said carrier is made of fiberglass.
32. (original) A self-adhering underlayment as described in Claim 17, wherein:  
said carrier is made of a material selected from the group consisting of polyester and fiberglass and a combination of polyester and fiberglass.
33. (currently amended) A self-adhering underlayment for tile roofing assemblies comprising:  
a dual-compound composite sheet having a carrier sheet with a front side and a back side, the carrier sheet being sandwiched between a top layer and a bottom layer [[:]] ;  
the top layer comprised of a mixture of: (a) polypropylene modifiers comprised of isotactic polypropylene, ethylene-propylene copolymer, atactic polypropylene and polyethylene, (b) filler, and (c) asphalt;  
the bottom layer comprised of ~~heat-and-pressure-activated~~ self-adhesive compound comprised of a mixture of: (a) styrene-butadiene-styrene copolymer, (b) styrene-isoprene-styrene copolymer, (c) hydrocarbon tackifying resins, and (d) asphalt; and  
said filler being comprised of a material selected from the group consisting of: limestone, talc, fly ash, volcanic ash, graphite, carbon black, silica, china clay, fire retardants and combinations thereof,  
said top layer having a surfacing agent at least partly imbedded in the upper surface of the composite,  
a release liner applied to the lower surface of the composite,  
a side lap running longitudinally along one lengthwise edge of the top layer of the composite; and  
an end lap runs widthwise along one end of the composite[[:.]] ;

a release film is applied to the side lap and end lap, and said a surfacing agent being partly imbedded in the upper surface of the composite in areas other than said side and end laps[.];

said carrier being made of a material selected from the group consisting of polyester and fiberglass and a combination of polyester and fiberglass.

34. (original) A self-adhering underlayment as described in Claim 33, wherein:

the top layer compound further being comprised of at least one fire retardant filler additives selected from the group consisting of calcium borate, magnesium borate, a mixture of antimony tri-oxide and deca bromo diphenyl oxide.

35. (original) A self-adhering underlayment as described in Claim 33, wherein:

the top layer compound is further comprised of tackifying resins.

36. (original) A self-adhering underlayment as described in Claim 33, wherein:

the top layer compound is further comprised of 0% to 2% tackifying resin.

37. (original) A self-adhering underlayment as described in Claim 33, wherein:

the release liner is a polyester, polypropylene or polyethylene film having a siliconized contact surface and a white color non-contact surface.

38. (original) A self-adhering underlayment as described in Claim 33, wherein:

the surfacing agent is selected from the group consisting of stitch-bonded polypropylene fabric and a granular material.
